Review to the devices

Dear Olga Nikolaevna!

Since 2008, CEG the branch of Magadanenergo, PJSC has been using the following devices manufactured by SKB EP, LLC: MIKO-1, MIKO-2.2, PKV/M7, PKR-1.

During the use, these devices have proven themselves from the best side.

MIKO-1 and MIKO-2.2 microohmmeters have optimal overall dimensions for performing the operation process on existing electrical installations. These devices are equipped with in-built rechargeable batteries. Availability of this feature significantly facilitates their operation when working at height.

PKV/M7 circuit breaker analyzer and PKR-1 OLTC analyzer are easy to operate and control. And despite all this simplicity the devices have a high measurement accuracy. Their use can significantly save time for diagnostics of electrical equipment and improve the quality of repair.

Chief of isolation
and overvoltage service A.V. Savirskiy
