ATTN: O.N. Ekaterinina
Director General
of SKB EP, LLC

Dear Olga Nikolaevna!

Since 2017, we have been measuring resistance of the main circuits of high-voltage column and tank circuit breakers with the help of MIKO-21 microohmmeter.

Advantages of the device: intuitive and easy-to-use interface, touch-screen color display, small dimensions and weight, a wide range of manually set values of the test current, the ability to transfer measurement results to the computer. MIKO-21 works both from the 230V network and from the built-in power supply. The complete set of the device assumes the possibility of choosing different test cable options.

During the operation, there were no failures or malfunctions in the operation of the micro-ohmmeter.

Executive Director
of Production

A. Aliev
