Review of instruments operation

Director General of SKB EP, LLC
ATTN: O.N.Ekaterinina

Dear Olga Nikolaevna!

Nowadays, the following instruments are operated in YUTEC - Pyt-Yakh, JSC, electrotechnical laboratory: MIKO-1, MIKO-7, MIKO-7M. These instruments are designed for preventive measurements and revealing malfunctions of electrical equipment. MIKO-7 and MIKO-7M milli-ohmmeters in our organization are used to measure resistance of 6 and 35 kV power transformers windings. Unlike a DC Bridge, which made similar measurements, MIKO-7 has established itself as a reliable, compact, high-speed instrument during operation and that fact led to MIKO-7M and MIKO-1 purchase. MIKO-1 micro-ohmmeter is used in our organization to measure contact resistance of contacts of 6-35kV oil-blast, vacuum and SF6 circuit breakers. The precision and ease of measurement, with the addition of prompt obtained result, have removed the previous micro-ohmmeter to the shelf with dust, guaranteed.

For the present, MIKO-1 has confirmed the reputation of SKB EP, LLC as a high-quality and responsible manufacturer of electrical instruments.

YUTEC - Pyt-Yakh, JSC thanks SKB EP, JSC for the high quality of instruments and the interest shown in its products after the sale.

Director of YUTEC-Pyt-Yakh

A.V. Turutin
