MIKO-1 microohmmeter has been in operation at the Nakhodka Water Service Company, MUE since 2010. It is used for resistance measurement of the switching equipment (oil, vacuum circuit breakers, busbar and cable connections).

The device is quite convenient and easy to use. Small dimensions, autonomous power supply and simplicity of its operation are only one of the advantages of MIKO-1, plus the device makes fairly accurate measurements. Mainly it is used for troubleshooting and post repair works on busbars, cable connections, oil and vacuum circuit breakers, and other switching equipment.

A lot of times MIKO-1 helped us to prevent emergency situations.

We would like to recommend this device for troubleshooting, repairing, and configuring of the switching equipment.

Master of power utilities
