About operation of the instrument

Dear Olga Nikolaevna!

Currently, two PKV/M7 instruments have been operated since 2019 in the electrical department of ENGINEERING CONSTRUCTION SERVICE, LLC, in Bratsk branch. Oil circuit breakers MG-10, MG-110, MG-20, MGU-020 are analyzed by these SKB EP`s instruments. The instruments are quite convenient to use, easy to transport and carry in hands, also they are compact and have a relatively low weight. It is possible to accurately determine circuit breaker time and speed characteristics of closing and opening, pressing and moving parts travel. A defect while closing MG-110 has revealed by PKV/M7 (speed change, braking). The usage of PKV/M7 has great advantages in comparison with old methods of circuit breakers diagnostic. We can confidently recommend using of PKV/M7 instrument to other organizations for electrical equipment diagnostic. It is worth noticing "TRADE-IN" promotion that can provide 15-20% discount for new instruments.

Head of the branch
