Review of instruments operation

ATTN: O.N.Ekaterinina
Director General
of SKB EP, LLC

Dear Olga Nikolaevna!

The electrical laboratory of power stations of CHP-3 Tomsk Generation, JSC has successfully using the following instruments manufactured by SKB EP, LLC:

1. MIKO-2.3 since 2014
2. MIKO-1 since 2020.

These instruments are operated during regular diagnostic of:

- 110-220 kV electrical equipment, such as power transformers, autotransformers, high-voltage switches, short-circuiting switches;
- switchgear equipment and 0.4-6 kV electric motors.

The instruments have shown themselves to advantage in operation. They are convenient while using. They allow to carry out diagnostic with high precision. I would especially like to mention MIKO-2.3 instrument:

- fast charging system that allows you to quickly prepare the instrument for operation;
- light instrument weight;
- versatility that allows you to use one instrument instead of several ones.

In the future, when applying for the test instruments purchase, SKB EP LLC instruments will be in priority positions, as proven instruments in practice.

I recommend the instruments of SKB EP, LLC to other specialists involved in the diagnostic and electrical equipment testing.

Deputy Director

V.A. Plaksin
