Review of HV circuit breaker analyzer
PKV M6N

Dear Anna Ivanovna!

The high-voltage circuit breaker analyzers PKV/M6N are actively used in our company. Two instruments have been in the operation – the first one since 2017 and the second one since 2018. The instruments are simple and convenient to use. They allow us to easily assess condition of high-voltage circuit breakers without demounting and consequently reduce the labor input. With the help of these instruments we measure characteristics of MKP-110, U-110, VMT-110 high-voltage circuit breakers, as well as high-voltage circuit breakers up to 35 kV.

During the operation of the above-mentioned instruments, no negative comments were revealed.

Deputy chief of the electric power
substation department
