Feedback on MIKO-10 instrument

To the General Director of LLC "SKB EP"
O. N. Ekaterinina

Dear Olga Nikolaevna,

One MIKO-10 has been in operation at the plant of cars on B0 platform since April 2021. In operation of the instrument, no operational shortcomings have been identified to date.

The main advantages of the instrument are its compactness, reliability, and necessary functionality. The ability to place the instrument on the hand or belt, as well as the automatic start mode, reduce the time required for measurements.

The instrument is supplied with a full set of documents, which in turn allowed the device to be registered for metrological accounting in our production in the shortest possible time.

MIKO-10 was purchased due to the need for operational measurements of transitional electrical resistance to direct current under operating conditions. The main purpose of the instrument in welding is to conduct a comprehensive assessment of contacts of the secondary circuit of welding equipment, and as a result, to implement timely actions aimed at improving the quality of the welding of parts.

We thank LLC "SKB EP" for the quality development and functionality of MIKO-10 and hope for further cooperation and production of new promising instruments.
