Dear Olga Nikolaevna!

The instrument MIKO-10 has been in operation in the electrotechnical laboratory of Zavod im. S.M. Kirova, JSC since 2017.

We use this instrument for contact resistances measurements of high-voltage and low-voltage equipment at our enterprise.

During the operation, the MIKO-10 has proven its reliability, ease of use, accuracy and quickness of measurements.

The main advantage of the instrument is its functional ability to archive measurement data made, which significantly reduces the time of regulated work when measuring contact resistances of various equipment.

There has been no serious disadvantages and minuses in the instrument and its functionality.

From the moment we used the instrument, ETL specialists diagnosed dozens of malfunctions in the electrical equipment earthing systems, that was a dangerous factor regarding electrical safety. In particular, different defects of the equipment produced by our company were revealed at an early assembly stage.

Based on the above mentioned and with great confidence, we can recommend instruments of SKB EP to various enterprises.

Chief Engineer

N.P.Kozhemyakin
