Subject: Review about the use of the devices manufactured by SKB EP, LLC

Dear Olga Nikolaevna!

In August 2019, our company purchased MIKO-7 milliohmmeter for the needs of the electrotechnical laboratory. This device was purchased to replace the DC bridge R333.

During the use, the device has proven itself on the positive side.

The main advantage that was noted when working with MIKO-7 is the high measurement speed that significantly reduced the time required to check the resistance of the transformer windings.

I would also like to mention the strong robust and shockproof case of MIKO-7 that allows you to transport the device without fear of damaging it.

The only inconvenience is the lack of a built-in battery for the possibility of autonomous operation. As far as we know, this flaw is taken into account and corrected in the new modification of the device MIKO-7M(A).

During the entire operation of the device, there were no failures in its operation.

We look forward to further cooperation and recommend SKB EP as a reliable and competent partner.

Best regards,
Director of VES Energo Partnership, LLP

E.I. Litvinova
