Review to MIKO-21 microohmmeter

ATTN: O.N. Ekaterinina
Director General of
SKB EP, LLC

Dear Olga Nikolaevna!

Our company purchased MIKO-21 microohmmeter in 2018. Since this year, we have been using it to measure contact resistances of circuit breakers, bolted connections and painted pipelines.

During the work, the following advantages were revealed:

1. Auto measurement start;
2. Ability to adjust test current strength independently;
3. You can work from the network or from the battery;
4. Convenience of the case during transportation, its robustness to external impact;
5. Special cable to measure uncleaned surfaces.

Moreover, we would like to note the intuitive interface of the software for the PC and the ability to create your own objects in this software.

We can confidently recommend MIKO-21 microohmmeter to other companies and allow using this review on the skbep.com website.

Best regards,
Head of ETL
