Director General of SKB EP, LLC

Dear Olga Nikolaevna!

In response to your letter No. 27468 dated 22.04.2021 "Review of the instrument", I inform you that MIKO-2.3 instrument (serial number 160) has been used by Sibir-Polymetals, JSC. It has been used since December 2015 to measure contact resistances of VGT-110 and VEB-110 circuit breakers contacts, to measure windings resistance of transformers and motors on DC. The instrument is small, has a low weight, that is very convenient during operation. We consider the instrument best functions to be the ability to measure contact resistances of circuit breakers contacts with a high current and a short battery charge time. Based on the experience of MIKO-2.3 operation, we can recommend other organizations to use it.

We do not object to posting our review for advertising purposes on the website of your organization with the approval of the text by a public relations specialist of Siberia-Polymetals, JSC.

Best wishes,
Chief Engineer

A.A. Kolesnikov
