Review of MIKO-10 operation

Dear Olga Nikolaevna!

MIKO-10 instrument has been operated for several years in the laboratory of DMZ, LLC. Basically, the instrument is used by us on products of our manufacture (copper busbar, rod) in order to exclude the manufacture of low-quality products. I would especially emphasize the simplicity and convenience of instrument usage. Digital measurement characteristics exclude a possible error when recording. Light weight and compactness allow you to quickly replace the instrument to any necessary location.

DMZ, LLC thank you for such a convenient instrument. We plan to continue our cooperation and recommend the instruments of your manufacture.

Head of plant central laboratoty

Valiullova A.S.
