Dear Olga Nikolaevna!

We inform you that the instrument PKV/M7 (prod. N2 53, 2012), milli-ohmmeter MIKO-8M (prod. N2 035J, 2018) manufactured by SKB EP, LLC (Specialized Design Bureau of Electrotechnical Instrumentation, LLC) are in operation at Kumerautskaya CHP, LLC.

With the PKV/M7 instrument, diagnostic and checking of electrical characteristics of high-voltage circuit breakers are carried out at the station, and the MIKO-8M milli-ohmmeter is used to measure DC resistances of windings and coils of electrical equipment, contact resistances of high-voltage circuit breakers and electrical equipment.

Owing to the fact that the instruments are realized on the basis of microprocessor technologies, it has become much more convenient and efficient to carry out measurements, the accuracy of measurement results and safety have increased, and archiving has become possible.

We express our gratitude to the SKB EP, LLC specialists for the development of such modern, functional testing devices and instruments, and also recommend their use at electric power facilities.

Deputy Chief
Engineer – Head of the
Technical Department of
Kumertautskaya CHP,
LLC

E.A. Shevchenko
