Feedback on the MIKO-10 operation

Dear Olga Nikolaevna!

The laboratory of DMZ LLC has been using the MIKO-10 instrument for several years now. Basically, the device is used by us on products of our own manufacture (copper busbar, rod), in order to exclude the manufacture of inadequate quality products. I would especially emphasize the simplicity and convenience of instrument usage. Digital measurement characteristics eliminate the possibility of errors when reading. Light weight and compactness allow you to quickly move the instrument to any necessary location.

DMZ LLC expresses its gratitude to you for such a convenient device. We plan to continue cooperation with your organization and recommend your manufactured instruments for use.

Head of the Central Factory Laboratory

Valiulova A.S.
