Review of PKV/M7 instrument operation

Dear Olga Nikolaevna!

In Tatar grids, the branch of RES, JSC, PKV/ M7 instrument manufactured by SKB EP, has been operated since February 2021.

This instrument is widely used for non-demountable control of speed and travel parameters, time characteristics of oil-blast circuit breakers (VMT-110, S-35, VM-35, VT-35, VMG-10, VMP-10, VMG-133, VK-10, VKE-10) and vacuum circuit breakers (VVTE-10, BB/TEL-10).

PKV/M7 has showed itself to advantage, when demonstrating reliability, stability, ease of operation. It has high measurement precision and small dimensions.

PKV/M7 instrument allows you to measure a number of important circuit breakers parameters in one cycle (penetration, time difference, speed, time, etc.), which significantly reduces the time for assessing circuit breakers condition and repairing equipment.

We recommend PKV/M7 to organizations engaged in maintenance, diagnostic and repair of high-voltage circuit breakers.

Head of power stations Department
